

MODERNIZATION OF THE TORONTO MAINTENANCE CENTRE

The transformation of the Toronto Maintenance Centre (TMC) is an important step in VIA Rail's modernization process. The work that will be carried out will provide our employees with the necessary tools they need to maintain the new Corridor fleet as well as the current fleet.

VIA Rail wishes to ensure a good quality of life for the neighbourhood during construction and will implement mitigation measures to achieve this. You can send us your comments on the construction by visiting our website at viarail.ca.

An economic driver for the region

- **More than 450 jobs:** The project will generate local jobs in the construction industry and skilled trades from here to the completion in 2026.
- **Major Investment:** This modernization project is part of a \$1.5 B investment to replace the Québec City-Windsor corridor fleet and will dynamize the region's economy during its construction.
- **Respectful:** Neighbourhood quality of life is a priority for VIA Rail. We are committed to minimize the impact of our work on the community.

A state-of-the-art maintenance centre

- The new maintenance centre will be equipped with Vehicle Equipment Measurement Systems (VEMS), enabling real-time analysis of fleet performance.
- The work will provide the centre with essential infrastructure, including the ability to service and maintain our trains in a single location, improving the efficiency of the process.

New Corridor fleet: An unparalleled travel experience

- The new maintenance centre will be one of the homes for VIA Rail's new fleet of 32 trains on the Québec City-Windsor corridor.
- This new fleet will offer a barrier-free, and fully accessible travel experience.
- It will also be one of the most environmentally friendly fleets in North America.
